

AXIAL THRESHER EASY CLEAN FLDI

Référence : FLBAEC

The advantages of the corn sheller are reduced kernel and germ breakage, and the ability to seed very small amounts.

Description technique :

This thresher is suitable for small and medium-sized surfaces (threshing from 10 to 17 m³ / hour.) It can be used for crops under cover as well as crops in the open fields. This machine can be used in a fixed position on farms or in a factory (it can be integrated into a cleaning line). AN EASY-CLEAN AXIAL THREADER? The opening by a system of cylinders of the beater and the pre-cleaner facilitates access and allows a complete and more efficient cleaning of the machine. With this cleaning, the risk of batch mixing is eliminated. This machine can be transported by road, by boat (removable for loading in a container). Our thresher already exists in 3 versions: - Fully electric version with an on-board generator - Fully electric version with mains connection - Fully hydraulic version with power take-off
