

BULK SAWDUST UNLOADING ROBOT

Référence : FL1120LE

This equipment is equipped with a set of mechanisms and automatisms, the purpose of which is to laterally deposit a pile of sawdust. This unloading robot is mounted in a mobile position on guide rails, inside a building dedicated to its use.

Description technique :

Material transported: "dry sawdust" Maintenance constraints are simplified as much as possible. The EN 954-1 standard has been taken into account for the architecture of the safety functions. The mode dial is a touch screen. The machine is fitted with an automatic mechanism ensuring its possible derailment. Motors and gears are housed.
